        let data = event.data

        /**
         * @typedef {Object<string, any>} Data
         *
         * @property {boolean} success - Whether the login was successful
         * @property {string} token - The data returned from the login i.e. Fire Token
         */

        // data.token is the message sent from the fireOAuthChannel after verification
        // data.success is a boolean that indicates whether the verification was successful
        // data.token is the fire token

        // What to do with the Fire Token?

        // * Fire Token is an unique token which uniquely identifies the user who authorized your login attempt
        with Fire

        // * You can use this token ONLY ONCE as it will be destroyed after the first use

        // 1. Send the fire token to the Fire Server to verify the user

        // - You can do that client sided or server sided

        // - You need to send a POST Request to the Fire Server with the fire token

        // at the URL: http://localhost:3003/api/tokens/verify

        // - The Fire Server will verify the fire token and return a response

        // - If the verification was successful - CODE (200), the Fire Server will return a response with the user's
        data

        // - If the verification was unsuccessful - CODE (400) or CODE (401), the Fire Server will return a
        response with an error 'message'

        // - You can use the data returned from the Fire Server to create a new user in your database

```

```

// This example will send the token to Fire Servers and console.log the response console.log("%c"

agdb.com/online_html_compiler

The screenshot shows an online HTML compiler interface. At the top, there's a toolbar with icons for Run, Debug, Stop, Share, Save, Beautify, and Download. Below the toolbar is a file explorer showing 'index.html'. The main editor area displays CSS code for a login form, including rules for user-select, font-size, font-weight, text-decoration, text-align, color, font-weight, padding, and media queries. The preview area on the right shows a rendered login form with a white background, a light gray border, and a light gray box-shadow. The form contains a text input field, a password input field, an email input field, and a login button. The preview area also shows a list of CSS rules applied to the document, including the ones defined in the editor.
